SUMMARY

Full Stack Web Developer with experience at SS Marketing building responsive applications with React and WordPress. Skilled in API integration and project coordination, delivering solutions that improve user experience and streamline workflows. Committed to clean coding practices and collaborative teamwork.

TECHNICAL SKILLS

Backend Languages: Python, JavaScript, SQL
Frontend: React, HTML, CSS
Content Management: WordPress
Database: PostgreSQL, schema design
DevOps Tools: Docker, GitHub, Linux
Also worked with: API integration, Project management, Flutter

EXPERIENCE

Web Developer — SS Marketing | 06/2025 – 12/2025 | Raipur, Chhattisgarh

- Developed and maintained web applications using core web technologies, ensuring clean, efficient code that meets user needs.
- Collaborated with design and technical teams to deliver projects on time, improving project workflow and team synergy.
- Created HTML/CSS layouts for landing pages and built responsive marketing pages for client campaigns.
- Edited and refreshed website content in WordPress to keep it accurate and relevant.

PROJECTS

BlackBox — AI-Assisted Crash Diagnosis Platform | Live
Python, FastAPI, React, PostgreSQL, Celery, Redis, Docker

- Defined requirements and feature scope for a full-stack STM32/FreeRTOS crash-diagnosis platform: FastAPI backend, React frontend, PostgreSQL schema, role-based access control, and a retrieval-grounded diagnosis workflow.
- Configured and deployed from local Docker containers to Render, including environment variables, managed PostgreSQL, and API/frontend build settings.

  Live: blackbox-frontend-7tlu.onrender.com | Code: github.com/Yash01052002/Diagnosis_System

Suraksha — Women's Safety Application | Completed
Flutter, Dart, Firebase, Twilio

- Developed an Android safety app with shake-to-alert SOS, live location sharing, and automated emergency alerts to trusted contacts via the Twilio API.
- Built a Wear OS companion app and packaged an installable APK.

  Code & APK: github.com/Yash01052002/Suraksha

Support Ticket System — Auto-Triage Helpdesk API | In progress
Python, FastAPI, PostgreSQL, Docker

- Built a ticketing backend covering the full ticket lifecycle, with JWT authentication, admin/agent/customer roles, comments, internal notes, and event logging.
- Configured multi-service local development with Docker Compose across the API and PostgreSQL.
